International filing date (daytmonth/year)

29.07.2003 31.07.2002

E.I. DU PONT DE NEMOURS AND COMPANY et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed inventions is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

INTERNATIONAL PRELIMINARY International application No. PCT/US03/23817 EXAMINATION REPORT - SEPARATE SHEET

I The most relevant document is EP-A 1 036 775 (D1), directed to PVB for use in moisture-resistant laminated glass. D1 discloses plasticized PVB of the same type as defined in the present application, using the same plasticizers in the same amount, and containing a combination of at least two salts selected from the group of potassium and magnesium carboxylates as adhesion control agents in an amount of preferably 10 to 150 ppm. There is however only one working example in which a combination of a potassium carboxylate and a magnesium carboxylate is used, and the K/Mg weight ratio (as metals) there is 14,6:1. There is no disclosure or suggestion of observing a K/Mg ratio within the range of 0,05:1 to 5:1.

The other documents are directed to different problems. US-A 5 427 861 discloses plasticized PVB for use in laminated glass, which contains a magnesium carboxylate and which may contain a minor amount of a potassium or sodium salt. The working example shows a ratio K/Mg of 0,033.

Novelty is evidently given. The present application seems to solve the problem of improving the compositions of D1. The comparative examples of the present application make plausible that the upper limit of 5:1 for the ratio K/Mg is essential for solving the problem. As this was not disclosed or suggested in any of the documents cited in the search report, the independent claims also involve an inventive step.
